

National Spatial Data Infrastructure

# **National Hydrography Data Content Standard for Coastal and Inland Waterways – Public Review Draft**

Bathymetric Subcommittee  
Federal Geographic Data Committee

January 2000

Federal Geographic Data Committee

Established by Office of Management and Budget Circular A-16, the Federal Geographic Data Committee (FGDC) promotes the coordinated development, use, sharing, and dissemination of geographic data.

The FGDC is composed of representatives from the Departments of Agriculture, Commerce, Defense, Energy, Housing and Urban Development, the Interior, State, and Transportation; the Environmental Protection Agency; the Federal Emergency Management Agency; the Library of Congress; the National Aeronautics and Space Administration; the National Archives and Records Administration; and the Tennessee Valley Authority. Additional Federal agencies participate on FGDC subcommittees and working groups. The Department of the Interior chairs the committee.

FGDC subcommittees work on issues related to data categories coordinated under the circular. Subcommittees establish and implement standards for data content, quality, and transfer; encourage the exchange of information and the transfer of data; and organize the collection of geographic data to reduce duplication of effort. Working groups are established for issues that transcend data categories.

For more information about the committee, or to be added to the committee's newsletter mailing list, please contact:

1 1. INTRODUCTION

2  
3  
4 1.1 OBJECTIVE

5  
6 Geospatial hydrography data for waterways, shorelines, coastlines, etc. that supports transportation  
7 applications has been specified as one of the key framework information layers for the National Spatial  
8 Data Infrastructure (NSDI). The objective of this NSDI Hydrography Data Content Standard for Coastal  
9 and Inland Waterways (hereafter called the Hydrography Standard) project is to develop a nationally  
10 focused hydrographic data content standard for spatial data that supports safety of navigation. When  
11 complete, this standard will provide a consistent catalog of terms and definitions (semantics) to ensure  
12 uniform interpretation of information across a variety of organizations that develop and use hydrographic  
13 feature data and applications. This standard is based upon a well known logical data model for geospatial  
14 data of features, attributes, and domain values that is consistent with the Spatial Data Transfer  
15 Standard/Federal Information Processing Standard (SDTS/FIPS 173 part 2).

16  
17 1.2 SCOPE

18  
19 The scope of this Hydrography Standard project first focused on developing a catalog of hydrographic  
20 feature terms and definitions pertaining to navigation of coastal and inland waterways. In that the guidance  
21 from the NSDI concentrated on transportation/navigation, the team limited the scope to information relating  
22 to charting and electronic chart display applications. This standard will not address data distribution  
23 formats, extraction criteria, or accuracy reporting methods beyond inland and coastal waterways. This  
24 standard does not currently address hydrographic symbology. However, in future versions/releases of this  
25 standard it is planned to add this standard symbology information.

---

29 1.3 APPLICABILITY

30 This Hydrography Standard is applicable to any U.S. organization that generates hydrographic feature  
31 information that supports coastal and inland waterways navigation. This standard is also applicable to any  
32 U.S. organization that uses hydrographic feature information generated by another organization and must  
33 translate its feature schema to a common feature schema based upon a standard hydrographic dictionary.

34

35 1.4 JUSTIFICATION/BENEFITS

36

37 There has never been a national data content standard for hydrographic data that support navigation  
38 applications; yet there has been interest from federal agencies, private industry, and the public for a  
39 uniform presentation of this type information for some time. A data content standard that supports  
40 navigation applications will ensure effective use and exchange of geospatial data across multiple agencies,  
41 organizations, and other users.

42 Specifically, this Hydrography Standard will facilitate semantic consistency when capturing geospatial  
43 hydrographic information for military and commercial navigation and electronic charting databases (in a  
44 GIS or CADD) and provide consistent data for applications that query, analyze this information, and  
45 interpreted this information for display of electronic charts. This standard will support cost savings  
46 associated with reducing the translating geospatial hydrographic information. This standard should also  
47 reduce the costs of building navigation applications by eliminating the “multi-fuel” requirement of handling  
48 many different type of hydrographic feature information.

49

50 1.5 RELATED STANDARDS

51

52 This Hydrography Standard closely parallels the hydrographic information contained within the  
53 following standards:

54 International Hydrographic Organization's S57 (IHO S-57) Appendix A, Object Catalog for Digital  
55 Hydrographic Data. IHO is an intergovernmental consultative and technical organization working to  
56 support the safety of navigation and the protection of the marine environment.  
57

58 North Atlantic Treaty Organization's (NATO) Digital Geographic Information Exchange Standard  
59 (DIGEST) Part 4, Feature Attribute Coding Catalog (FACC), a comprehensive coding scheme for  
60 features, their attributes and attribute. This allows for joint naval operations between sovereign  
61 countries and requires naval personnel to have familiarity amongst traditional S-57 and FACC.  
62

63 Tri-Service Spatial Data Standard (TSSDS Release 1.8), which is primarily used for civil and military  
64 installation mapping and facility management.  
65

66 U.S. Army Corps of Engineers (USACE) Regional Engineering and Environmental Geographic  
67 Information System (REEGIS) project's data dictionary for inland waterways and primarily used by the  
68 USACE for engineering, navigation and flood control structures along the Mississippi River.  
69

70 Also, this Hydrography Standard contains cross-references to the IHO- S57, NATA FACC, and TSSDS  
71 standards.  
72

## 73 1.6 STANDARDS DEVELOPMENT PROCESS

74

75 This standard was developed under the guidance and procedures specified by the Federal Geographic  
76 Data Committee (FGDC) under the authority of the Bathymetric Subcommittee. The FGDC announced the  
77 initiation of this Hydrography Standard project in the Federal Register in 1998 and issued a call for any  
78 interested party to participate on the project development team. The project team that developed this  
79 standard was composed of experts from the National Oceanographic and Atmospheric Administration  
80 (NOAA) and National Imagery and Mapping Agency (NIMA), the U.S. Army Corps of Engineers and the  
81 U.S. Coast Guard, several pilot associations, and private industry representatives. (These agencies and  
82 organizations represented users of various existing Hydrography standards.) In addition to the expertise  
83 brought to this project team from the various organizations represented, key documents were used in the  
84 development of this standard. These standards are cited as references in the Related Standards section of  
85 this document.

86 The first step after the formation of a Hydrography Standard project team was to agree upon the scope  
87 of this Hydrography Standard. The project team then reviewed key documents that consisted of adopted

88 standards and systems that had developed and used hydrographic feature data. The next step for the  
89 project team was to develop a master list of candidate features extracted from the related standards  
90 documents.

91 Next, the project team reviewed the master feature list and eliminated those clearly outside of the  
92 agreed to scope. A detailed comparison of feature terms and definitions extracted from the aforementioned  
93 standards was conducted. From this effort, the team was able to derive a standard feature term and  
94 definition for each feature. As a byproduct of this activity, a matrix was developed, which provides a  
95 mapping to related terms, or features, contained in each or the source standards. These matrices are  
96 included as appendices.

97 The project team has extracted all the attributes derived from the aforementioned standards and culled  
98 this list of attributes down to a subset of core attributes to include in the Hydrography standard. The  
99 project team created a domain list for each “category” of feature to facilitate the cross reference. Other  
100 attributes have been grouped into logical collections applicable to individual features to ease  
101 implementation. Finally, a draft Hydrography Standard document was generated to include the features,  
102 attributes, and domain terms and definitions lists, and additional descriptive documentation as specified by  
103 the FGDC directives on creating an NSDI standard.

104  
105 1.7 TARGET AUTHORIZATION BODY  
106

107 The Bathymetric Subcommittee originally proposed the development of this Hydrography Standard as  
108 an FGDC standard. The Bathymetric Subcommittee and the Standards Working Group of the FGDC may  
109 pursue a joint FGDC and American National Standards Institute (ANSI) adoption of this standard. To  
110 develop this Hydrography Standard through as an ANSI standard will require the development of an ANSI  
111 standard proposal and potentially an ANSI public review. The Bathymetric Subcommittee may consider  
112 (at a later date) promoting parts of this standard (e.g., inland waterways information) that are not currently  
113 part of the S-57 standard to International Hydrographic Organization for inclusion in their standard.

114

115 1.8 MAINTENANCE AUTHORITY

116

117 The National Oceanographic and Atmospheric Administration (NOAA) is the maintenance

118 organization for the Hydrography Standard for the Federal Geographic Data Committee. All general

119 questions and comments concerning this standard should be addressed to:

127

128 1.9 PARTS OF THE STANDARD

129

130 This Hydrography Standard consists of a detailed main body and four appendices. The main body of

131 the Hydrography Standard defines the purpose of this standard, the process followed during its

132 development, the organization(s) involved in its development and maintenance, the actual Hydrography

133 Standard Data Dictionary (sometimes called the Object Catalog), and its relationship to other standards.

134 Appendices A through D contain matrix cross-references between the respective source data standards and

135 the Hydrography Data Content Standard. Appendices A through D are informative and therefore not

136 mandatory.

2.0 DEFINITIONS

For the purpose of this Hydrography Data Content Standard, the following definitions apply.

- 2.1 **attribute** – a characteristic of an object (e.g., an attribute of hydrography surface course = degree of permanence of the surface course)
- 2.2 **attribute value** - a specific quality or quantity assigned to an attribute for a specific feature instance (e.g., electrical cable material = dry).
- 2.3 **data content standard** - provides the semantic definitions for a set of real world spatial phenomena of significance to a community. Data Content Standards may be organized and presented in a specified logical data model.
- 2.4 **domain** - a finite list (or range) of permissible values for a specified attribute. Included are tables of: units of measure, types, styles, status, names, methods, materials, dispositions, sources, dimensions, data, classes, etc. (e.g., degree of permanence = dry, intermittent, permanent, etc . . . )
- 2.5 **feature** – definition and description of a set (class of real world phenomena) into which similar feature instances are classified (e.g., shoreline and isohaline\_zone\_area).
- 2.6 **feature instance** - real-world spatial phenomenon about which data is collected, maintained, and disseminated. (e.g., the McMillan Water Reservoir). Feature instances are the geospatial objects that are graphically delineated in a spatial database.
- 2.7 **geospatial data** - data with implicit or explicit reference to a location relative to the surface of the earth.
- 2.8 **hydrography** - the science of the physical conditions, boundaries, flow, and related characteristics of earth's waters
- 2.9 **navigation** – to safely move on or through the water in a vessel.
- 2.10 **semantic content** – natural language information (e.g. names of features, attributes, and their phenomena on the earth’s surface)..

### 3.0 LOGICAL DATA MODEL

Agreement on a common format is not sufficient to ensure that the geospatial information transferred is meaningful to both the sender and the receiver. In order to share spatial data (and as part of a SDTS data transfer process) a common data model must be defined and used. In addition, semantic content of a spatial database (i.e., the entities and associated attribute and attribute value information) must be well defined and agreed upon by an application community and specified in either an off-line document (i.e. data content standard) and/or in the metadata for a given database. Part 2 of the SDTS is a formal attempt to develop a standardized list of entities. Additionally application communities that want to share geospatial information are developing data content standards modeled after the SDTS data model.

This Hydrography Standard data model (figure 1.) is based upon the SDTS geospatial data model as presented in Parts 1 and 2 of that standard as well as the specifications in ISO/IEC 8613-10:1995. The logical data model depicts the real world phenomena represented by features that are characterized by attributes that are assigned attribute values. This Hydrography Standard defines each of the features and their attributes and specifies a domain list for category attributes; e.g. those which further differentiate the individual features. In addition, this standard incorporates the use of a Feature Code, which identifies the feature in cryptic form for implementation of the standard. It also incorporates feature representation information that specifies the allowable graphic representations for each of the features.

1274 HYDROGRAPHY STANDARD ATTRIBUTE DEFINITIONS

1275	<b>Attribute Name</b>	<b>Attribute Definition</b>	<b>Data Type</b>
1276	<b>BRIDGE_TYPE</b>	The various types of bridges.	Text (30)
1277	<b>CALL_SIGN</b>	The designated call-sign of a radio station.	Text (30)
1278	<b>CARDINAL</b>	The four quadrants (north, east, south and west) are bounded by the true bearings NW-NE, NE-SE, SE-SW, and SW-NW taken from the point of interest. A cardinal mark is named after the quadrant in which it is placed.	Text (35)
1279			
1280			
1281			
1282	<b>CATEGORY</b>	The attribute which differentiates the "types" or "kinds" of like features which may be separately identified in the standard. The specific values (or domain) associated with the standard is a function of the individual feature type.	Text (35)
1283			
1284			
1285			
1286	<b>CHARACTER</b>	Any identifier comprised of the class, number and color(s) of flashes or occultations, of a light or lights at one geographic position [i.e. Q(6)+LF1, VQ G, L F1 (3+2)WR].	Text (30)
1287			
1288			
1289	<b>CLEARANCE</b>	The vertical clearance of an object in closed condition (e.g. a closed lifting bridge) measured from the plane towards the object overhead.	Text (30)
1290			
1291			
1292	<b>COLOR_PATTERN</b>	The various colour patterns of a navigational mark.	Text (30)
1293	<b>COMM_CHANNEL</b>	A channel number assigned to a specific radio frequency, frequencies or frequency band.	Text (30)
1294			
1295	<b>COMMON_NAME</b>	A unofficial, slang, or other common or textual designation of the feature.	Text (55)
1296			
1297	<b>CONDITION</b>	A domain value indicating the physical situation or condition of the feature.	Text (35)
1298			
1299	<b>CONSTRUCTION</b>	A domain indicating the technique or primary method used in building or constructing the feature.	Text (35)
1300			
1301	<b>COUNTRY</b>	The attribute indicates the nationality of the specific object or feature.	Text (30)
1302			
1303	<b>DATE_END</b>	The date the feature will, or is expected to, cease to exist, if known. May also indicate the latest date on which the feature may reasonably be expected to be present in this location. This date will almost always be in the future.	Numeric
1304			
1305			
1306			
1307	<b>DATE_START</b>	The date the existence of the feature began, if known. May also indicate the earliest date on which the feature may reasonably be expected to be present in this location.	Numeric
1308			
1309			
1310	<b>DEPTH</b>	The numeric distance from the surface of the earth to the deepest	Numeric

---

1311		point of the feature.	
1312	<b>DEPTH_ACC</b>	The best estimate of the accuracy of the sounding data	Text (30)
1313	<b>DEPTH_DATUM</b>	The name of the datum which determines the reference for the	Text (30)
1314		numeric attribute Depth.	
1315	<b>DESCRIPTION</b>	A user defined description of the feature.	Text (255)
1316	<b>DESIGNATOR</b>	Any identifying number which differentiates the feature from any	Numeric
1317		other similar features.	
1318	<b>DIAMETER</b>	Pipe diameter in inches	Numeric
1319	<b>DIRECTIVITY</b>	The side or sides of a feature which produces the greatest	Text (30)
1320		reflectivity potential.	
1321	<b>ELEVATION</b>	The altitude of the ground level of an object, measured from a	Text (30)
1322		specified vertical datum.	
1323	<b>EST_RANGE</b>	The estimated range of a non-optical electromagnetic	Text (30)
1324		transmission.	
1325	<b>FACC_CAT</b>	The differentiation attribute which exists within the Feature and	Text (30)
1326		Attribute Coding Catalog Standard.	
1327	<b>FORMAL_NAME</b>	A official name or textual designation of the feature.	Text (55)
1328	<b>FREQUENCY</b>	The frequency of a signal.	Text (30)
1329	<b>FUNCTION</b>	The function, or purpose of various buildings.	Text (30)
1330	<b>HEIGHT</b>	The numeric height of the feature as measured from the lowest	Numeric
1331		point to the highest point.	
1332	<b>HORIZ_ACC</b>	The best estimate of the horizontal accuracy of horizontal	Numeric
1333		clearance and distances.	
1334	<b>HORIZ_CLEARANCE</b>	The numeric horizontal distance through an opening in the	Numeric
1335		feature.	
1336	<b>HORIZ_DATUM</b>	Horizontal datum. The name of the reference used for	Text (30)
1337		measurements in the horizontal direction.	
1338	<b>IDENTIFIER</b>	A unique number which identifies the feature as opposed to all	Text (30)
1339		other features of the same type.	
1340	<b>LATERAL</b>	There are two international buoyage regions, A and B, between	Text (30)
1341		which lateral marks differ. The buoyage region is encoded using	
1342		the separate attribute MARSYS. When top-marks, retro reflectors	
1343		and/or lights are fitted to these marks, they are encoded as separate	
1344		objects.	
1345	<b>LENGTH</b>	A measurement of the longer of two linear axis.	Numeric
1346	<b>MAG_ANOMALY</b>	The value of the deviation from the normal magnetic variation.	Numeric

---

1347	<b>MAG_VARIATION</b>	Horizontal angle between true north and magnetic north	Numeric
1348		measured East (positive value) or West (negative value) according	
1349		to whether magnetic north lies east or west of true north.	
1350	<b>MATERIAL</b>	A domain specifying the primary material used on the	Text (35)
1351		construction of the feature.	
1352	<b>MAX_RANGE</b>	The extreme distance at which an object can be seen or a signal	Numeric
1353		detected in nautical miles	
1354	<b>MAX_RATE</b>	Maximum speed of current.	Numeric
1355	<b>MIN_RATE</b>	Minimum speed of current.	Numeric
1356	<b>NATURE_BOTTOM</b>	The attribute 'nature of surface' encodes the general nature of	Text (30)
1357		the material of which the land surface or the sea bed is composed.	
1358	<b>NO_FLOORS</b>	The number of floors or levels within a structure.	Numeric
1359	<b>NUM_SPANS</b>	Number of spans in a bridge or aqueduct.	Numeric
1360	<b>ORIENTATION</b>	The angular distance measured from true north to the major axis	Numeric
1361		of the object.	
1362	<b>PERIOD</b>	The time occupied by an entire cycle of intervals of light and	Text (30)
1363		eclipse.	
1364	<b>PERMIT</b>	Any permit required for the vessel.	Text (30)
1365	<b>PRIMARY_COLOR</b>	The Primary or most frequently occurring color of the feature.	Text (12)
1366	<b>PRODUCT</b>	The various substances which are transported, stored or	Text (30)
1367		exploited.	
1368	<b>QUALITY</b>	The reliability of the value of sounding.	Text (30)
1369	<b>RADAR_REFLECTOR</b>	Indicates whether or not a radar reflector is attached to, or	Text (30)
1370		connected with, a feature.	
1371	<b>RADIUS</b>	The vector extending from the centre to the periphery of a	Text (30)
1372		circular or spherical object.	
1373	<b>RANGE</b>	The nominal range at which an object can be seen or a signal	Numeric
1374		detected in nautical miles.	
1375	<b>RECORD_DATE</b>	The date when the specific feature was captured, edited, or	Numeric
1376		deleted.	
1377	<b>RESTRICTION</b>	A domain value indicating any limitations or other conditions	Text (35)
1378		imposed on the use or function of the feature.	
1379	<b>RIVER_MILE</b>	The most currently used river mile designation for a given river	Text (30)
1380		system.	
1381	<b>S_57_CAT</b>	The differentiation attribute which exists within the IHO S-57	Text (30)
1382		Standard.	

---

1383	<b>SEA_TYPE</b>	The various types of sea areas.	Text (30)
1384	<b>SHAPE</b>	The various types or shapes of the daymarkers used on beacons	Text (30)
1385		or buoys.	
1386	<b>SIG_GROUP</b>	The number of signals, the combination of signals or the morse	Numeric
1387		character(s) within one period of full sequence.	
1388	<b>SIG_PERIOD</b>	The time occupied by an entire cycle of intervals of light and	Text (30)
1389		eclipse.	
1390	<b>SIQ_SEQUENCE</b>	The sequence of times occupied by intervals of light and eclipse	Text (30)
1391		for all 'light characteristics' except for occulting where the	
1392		sequence of times is occupied by intervals of eclipse and light.	
1393	<b>SOURCE_DATE</b>	The production date of the source; e.g. the date of measurement.	Numeric
1394	<b>SPACES</b>	The total parking spaces available in the area including	Numeric
1395		handicapped or reserved spaces.	
1396	<b>SPECIAL_PURPOSE</b>	A mark may be a beacon, a buoy, a signpost or may take another	Text (30)
1397		form.	
1398	<b>STATUS</b>	A domain value indicating the current status of the feature.	Text (35)
1399	<b>SURFACE</b>	The physical surface composition of a road.	Text (30)
1400	<b>TIME_END</b>	The end of a active period.	Numeric
1401	<b>TIME_START</b>	The start of an active period.	Numeric
1402	<b>TONNAGE</b>	Tonnage of a sunken or stranded wreck.	Numeric
1403	<b>TOP_MARK</b>	The characteristic shape secured at the top of a buoy or beacon	Text (30)
1404		to aid identification.	
1405	<b>TRACK_LENGTH</b>	Total cumulative length of track contained within confines of	Numeric
1406		the feature, exclusive of the branch or main trunk lines running	
1407		into and/or out of the feature.	
1408	<b>TRIP_LENGTH</b>	Length of crossing between shore points.	Numeric
1409	<b>VARIATION</b>	A positive value, i.e. unsigned indicates variation in an Easterly	Numeric
1410		direction while a negative value indicates variation in a westerly	
1411		direction.	
1412	<b>VELOCITY</b>	The speed of the current in knots. The rate of travel of a current.	Numeric
1413	<b>VERT_ACC</b>	The best estimate of the vertical accuracy of heights, vertical	Numeric
1414		distances, and vertical clearances, excluding sounding	
1415		measurements.	
1416	<b>VERT_CLEARANCE</b>	The numeric distance from the surface of the earth to the lowest	Numeric
1417		point associated with the feature.	
1418	<b>VERT_DATUM</b>	This attribute is used to specify the datum to which both heights	Text (30)

---

1419		and soundings are referred.	
1420	<b>VERT_LENGTH</b>	The total vertical length of an object.	Numeric
1421	<b>WATER_VELOCITY</b>	Range of water velocity, estimated in meters/second within	Numeric
1422		delineation of feature exclusive of high water due to runoff or	
1423		low water due to drought.	
1424	<b>WIDTH</b>	The numeric width of the feature as measured across its widest	Numeric
1425		dimension.	

1426 6.0 IMPLEMENTATION

1427  
1428 This Hydrography Standard has not yet been implemented in any significant way. Its organization,  
1429 however, is designed to permit easy implementation on a number of existing GIS and/or A-E-C/CADD  
1430 platforms. The conversion of the Hydrography Standard Logical Model to a physical implementation is  
1431 accomplished by specifying several naming conventions associated with the standard. These conventions  
1432 and the physical implementation, while compatible with most major database management systems, are  
1433 provided for information only and are not intended to mandate or recommend any vendors software. In  
1434 addition, the implementation strategy provided is only one of several acceptable strategies and is included  
1435 for information only. The revised organization of the Hydrography Standard and its naming conventions  
1436 are represented in Figure 2.

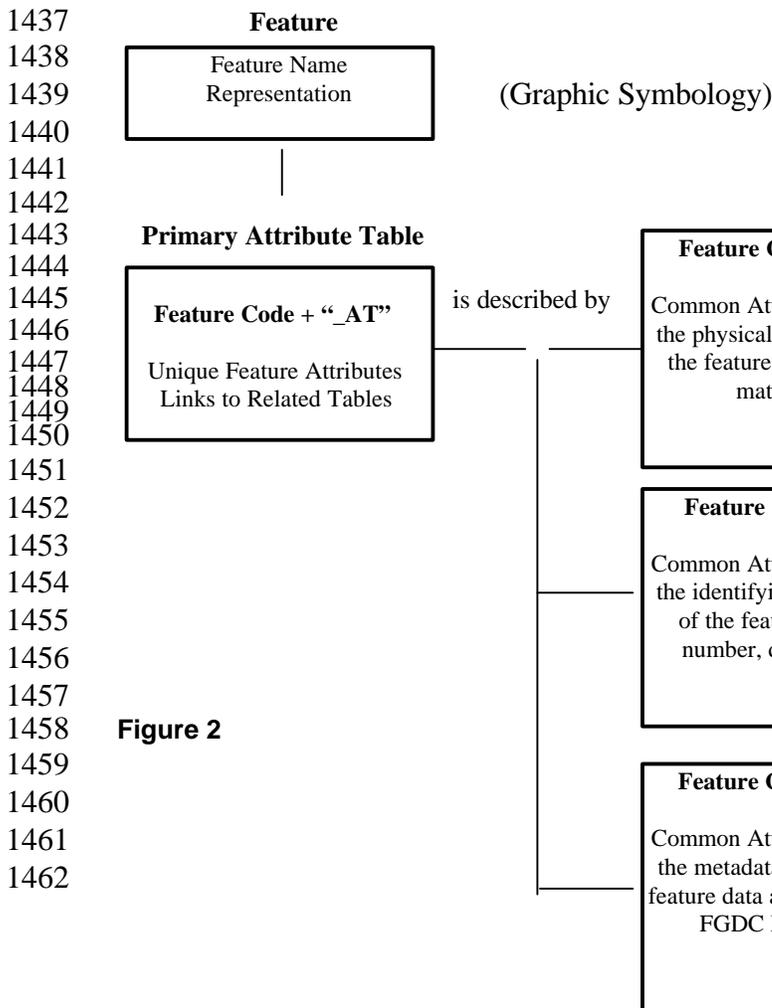

Figure 2

1463  
1464       The codes of the features and the names of the attributes are designed to meet the naming restrictions  
1465 associated with the major Relational Data Base Management Systems in use in the GIS field. And, by  
1466 defining standard “groupings” of attributes which apply to the features, it is possible to identify separate  
1467 “tables” of these attributes associated with each of the features, further simplifying implementation. The  
1468 attribute groupings defined include **IDENTIFICATION** – which specifies numbers, names, and  
1469 descriptions of the feature, **FORM** – which specifies physical characteristics of the features, and  
1470 **METADATA**.
