

Final Notes for 2004 CAP grant LA 4-6011-0408

TVA has completed implementation of the OGC WMS map service for which we received a CAP Grant number LA 4-6011-0408 (TVA00039681). Through this service TVA is providing access to our Aerial Photography Index (API). Other data sets will be provided at a later time.

The service can be found and used in the following manner:

Users can use a desktop application such as ArcMap or AutoCAD;
If the user is using ArcMap; in the "Add Data" window, click "GIS Servers" and then "Add WMS Server" and then paste the following string into the URL field; <http://ws.tva.com/giswms?ServiceName=API&>
Users can use a web viewer application such as wmsviewer.
Click the following link: <http://www.wmsviewer.com>
Then go to "edit servers"
go to "add new"
Copy - Paste this URL <http://ws.tva.com/giswms>
Select all layers and click OK
Update Maps
You can then zoom in to the area of interest. You can also add more detailed data from the edit servers window if you like - it starts from a world view.

The results of this project and instructions on how to access the map service will be presented to the ASPRS MidSouth Region Annual meeting to be held Nov. 10-11, 2005 in Athens GA. <http://www.rac.louisiana.edu/msasprs/nextmeeting/index.html>
