

Address Data / A common need

- **Program Contact**

- Federal Contact: Randy Fusaro
- NGAC Contact: Barney Krucoff

- **Current Activities of the Program**

- NTIA funding development of address points in rural areas within some states
- Census surveying federal agencies as to use of address points and geocoding, building case for common data/service.
- HUD showing some interest in addresses (more interest in parcels which are related)
- DOT proceeding with IFTN (streets are related)

Submitted by: Barney Krucoff

June 2011 NGAC Meeting

Addresses continued

- **Emerging Issues**

- NSGIC has published brochure with descriptions and recommendations
- Census, HUD, and DOT all present at this meeting

Submitted by: Barney Krucoff

NSGIC recommendations:

Activity	Timeframe
<p>Congress should remove addresses and address point locations from Federal privacy restrictions in all relevant Titles (e.g. Title 13 and Title 39).</p>	
<p>Congress and or OMB should instruct Federal agencies to jointly develop a common address point file in cooperation with state and local governments.</p>	
<p>If a national address point file can be publicly shareable, the U.S. Census Bureau should become the data steward addresses. If existing privacy constraints cannot be addressed, another Federal agency without such constraints should become the custodian of address points.</p>	

NSGIC recommendations:

Activity	Timeframe
<p>States must coordinate the development of address point files working with local governments. In anticipation of the 2020 decennial Census, and to support the American Community Survey, the U.S. Census Bureau should contract with willing States to coordinate state and local government address data activity and to provide pass-through funding to maintain local address point files.</p>	
<p>NGAC should advise on the degree that Addresses, Parcels, and street centerline development needs to be coordinated/integrated. (not from NSGIC)</p>
