FGDC Address Theme Definition

The Address Theme consists of the data elements, attributes, and metadata that specify a fixed geographic location by reference to a thoroughfare or landmark, or specifies a point of postal delivery, or both. The address theme does not include occupants or addressees nor does it include the features (parcels, building footprints, etc.) that may be specified by an address. The theme may include linkages between these features and other location reference methods.

– Agreed to by the Address Theme Subcommittee 1/30/2017

The following questions was put before the Address Theme Subcommittee membership on 1/17/2017:

Question: Does your department or agency approve the Address Theme definition for submission to the FGDC Coordination Group?

Vote: __ Yes __ No __ Abstain
