**Perspective on
Cross-Agency Map Sharing**

Request	Cross-Agency Map Sharing
Requestor	Managing Partner
ID	RQ7
Date Created	2016-07-21
Category	Communities
Summary	Explore GeoPlatform's capability/role in facilitating Cross Agency Web Map Sharing.
Context	Sharing AGOL content between Agency Specific licenses has some current limitations that the GeoPlatform may remedy. Example - I want to share an AGOL map between NOAA, FEMA, NGA and USGS in a response work group situation. It is not an 'official publication' but a mashup for inter-agency work. If it is created in FEMA's AGOL portal, can it be published to GeoPlatform and shared across other Agency registered users without full sharing to the public? It is understood that OMB MAX has an environment with at least limited geospatial functionality.
Consolidated Perspective	Ability to conduct cross-agency geospatial coordination in an 'official use only' environment would be beneficial across the federal government
ATWG Recommendation	Managing Partner should consider implementing a restricted access environment capability (or leveraging existing capabilities if existing) within the GeoPlatform with Identity Management controls to facilitate Cross Agency Web Map Sharing.
